

Rotary Step attenuators are used to adjust the power signal level by step within certain frequency range, they can also be used to adjust the test system's power level as inset attenuators, it is small with high accuracy and high stability etc.

SATR02-3-99.9-X-A9 type rotary step attenuators' average power 2W, frequency range from DC-18GHz, attenuation value 0-99.9dB by 0.1dB step.
